

F: Ford's Funny Fields

Problem author: David Ghiberdic, Rares Rauta

- **Problem:** Choose a subset of fields such that their total length is at least s , minimizing the total cost.

F: Ford's Funny Fields

Problem author: David Ghiberdic, Rares Rauta

- **Problem:** Choose a subset of fields such that their total length is at least s , minimizing the total cost.
- This is a variation of the classic 0/1 Knapsack Problem.

Problem author: David Ghiberdic, Rares Rauta

- **Problem:** Choose a subset of fields such that their total length is at least s , minimizing the total cost.
- This is a variation of the classic 0/1 Knapsack Problem.
- Iterate over all individual fields. Let $DP[j]$ be the minimum cost to reach a covered length j . We cap j at s .

- **Problem:** Choose a subset of fields such that their total length is at least s , minimizing the total cost.
- This is a variation of the classic 0/1 Knapsack Problem.
- Iterate over all individual fields. Let $DP[j]$ be the minimum cost to reach a covered length j . We cap j at s .
- Since there are at most $n \cdot x \leq 2000$ fields and $s \leq 2000$, DP updates take $\mathcal{O}(\sum x \cdot s)$ time, which securely passes bounds.
